3.4 Aerodynamics

Measurement conditions: Measured with a double chamber intake rig acc. to DIN EN ISO 5801.
Normal air density = 1,2 kg/m³; Temperature 23°C +/- 3°C;
In the intake and outlet area should not be any solid obstruction within 0,5 m. Motor shaft horizontal.
The information is only valid under the specified test conditions and may be changed by the installation conditions. If there are deviations from the standard test conditions, the characteristic values must be checked under the installed conditions. Power consumption of the fan motor when operating at normal voltage is shown. Depending on the operating conditions of the application, the power input may be higher.

a) Operation condition:
3.500 1/min at free air flow Frequency: 50 Hz Nominal voltage: 230 V

Max. free-air flow ($\Delta p = 0$ / $\dot{V} = \text{max.}$)	71 m ³ /h
Max. static pressure ($\Delta p = \text{max.}$ / $\dot{V} = 0$)	93 Pa

b) Operation condition:
3.500 1/min at free air flow Frequency: 60 Hz Nominal voltage: 115 V

Max. free-air flow ($\Delta p = 0$ / $\dot{V} = \text{max.}$)	71 m ³ /h
Max. static pressure ($\Delta p = \text{max.}$ / $\dot{V} = 0$)	93 Pa

3.5 Sound Data

Measurement conditions: Sound pressure level: 1 meter distance between microphone and the air intake.
Sound power level: According to DIN 45635 Part 38 (ISO 10302)
Measured in a semianechoic chamber with a background noise level of $L_p(A) < 5 \text{ dB(A)}$
For further measurement conditions see chapter aerodynamics.

According to the guidelines on the application of Directive 2006/95/EC, chapter III: Scope of the "low voltage" directive, paragraph: Are "components" included in the scope? the following has to be applied:

However, some types of electrical devices, designed and manufactured for being uses as basic components to be incorporated into other electrical equipment, are such that their safety to a very large extent depends on how they are integrated into the final product and the overall characteristics of the final product. These basic components include electronic and certain other components.

Taking into account these objectives of the "Low Voltage" Directive, such basic components, the safety of which can only, to a very large extend, be assessed taking into account, how they are incorporated and for which a risk assessment cannot be undertaken, then they are not covered as such by the Directive. In particular, they must not be CE marked unless covered by other Community legislation that requires CE marking.
