The efficiency values displayed for achieving conformity with the Ecodesign Regulation EU 327/2011 has been reached with defined air duct components (e.g. inlet rings).
The dimensions must be requested from ebm-papst. If other air conduction geometries are used on the installation side, the ebm-papst evaluation loses its validity/the conformity must be confirmed again.

The product does not fall within the scope of Regulation (EU) 2019/1781 due to the exception specified in Article 2 (2a) (motors completely integrated into a product).

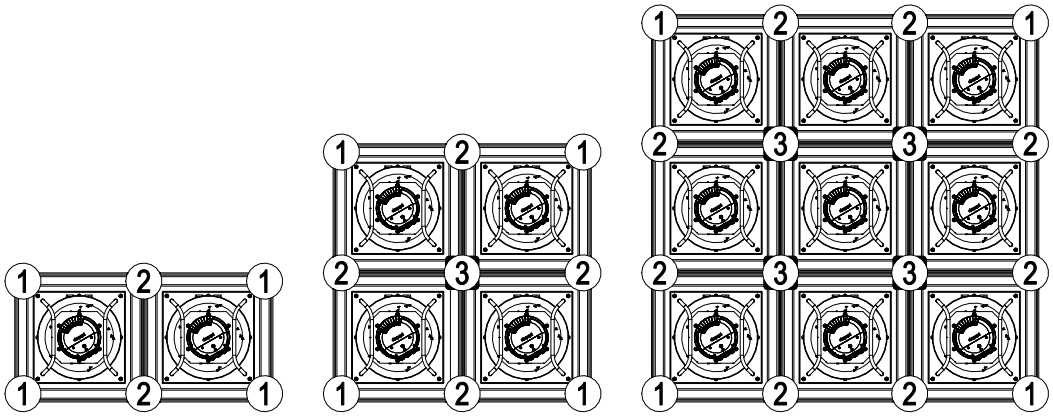
Accessory part



1 	4x	4x	4x
2 	2x	4x	8x
3 	-	1x	4x

1	Angle connector 93570-2-4060 for fastening to the floor, wall, or ceiling
2	Side connector 93572-2-4060 for fastening to the floor, wall, ceiling, or additional FanGrid fan
3	Cross connector 93574-2-4060
	The angle, side and cross connectors are fastened with the screws already present on the fan in the corner connectors. The screws have to be fitted by hand and secured with a tightening torque of 30±4.5 Nm. Screws for fastening to the floor, wall, or ceiling are not included in scope of delivery.
	There are four holes on each edge of the flange plate for screws. These holes must also be used for fastening to the floor, wall, ceiling or adjacent fans. Use M8 or 8 mm diameter screws and, if necessary, screw anchors of sufficient size and strength that the fan assembly cannot come loose even under heavy load.
	Maximum height: 5 FanGrid fans vertically. The assembly must be at least as wide as it is high. Example: 3 FanGrid fans vertically = at least 3 FanGrid fans horizontally.
	In a structure of one FanGrid fan in height and several FanGrid fans wide, the FanGrid fans must be screwed to the floor, the ceiling and the adjacent FanGrid fans.
	For a height of two or more FanGrid fans, the FanGrid fans must be screwed to the floor, the ceiling, the wall and the adjacent FanGrid fans.

Fitting instructions

	Assembled FanGrids may not be transported. There is a risk that the assembly could fall over or be damaged.
	If it is not possible to mount the fan combination to the floor, wall and ceiling, the fan combination must be mounted in an auxiliary construction that is suitably stable. The construction in which the fans are mounted must have sufficient strength to bear any loads that may occur over the entire service life.
	In order to avoid heavy loads due to the composite bending, from a height of four fans and a width of four fans, a consistent, vertical strut must be installed approximately in the center. From a width of six fans, a corresponding number of additional vertical struts must be installed. The struts can be attached to both the intake and the delivery side. The trim between the fans and the wall or ceiling (as bulkhead) must not be used as a supporting element.
